FOR IMMEDIATE RELEASE

Ohio Department of Agriculture to Begin Gypsy Moth Treatments in Stark County

REYNOLDSBURG, Ohio (May 14, 2014) – The Ohio Department of Agriculture will soon begin aerial treatments designed to control the gypsy moth population in Ohio. Treatments on 75 acres in Stark County will begin in mid-May, as larva and leaf development reaches the optimal threshold for treatment.

Treatments are administered using a low-flying aircraft that flies just above tree tops. High humidity, low temperature and minimal wind are crucial for a successful application. Treatment will most likely take place during early morning hours.

The department will use Dimilin, a growth regulating insecticide that targets gypsy moths in the larval stage. These treatments are not toxic to humans, pets, birds or fish.

Ohioans can view maps of treatment blocks at www.agri.ohio.gov. Daily updates on treatment progress across the state are available by calling 614-387-0907 or 1-800-282-1955, ext. 37, any time after 5 p.m.

Gypsy moths are invasive insects that defoliate over 300 species of trees and shrubs. In its caterpillar stage, the moth feeds on the leaves of trees and shrubs and is especially fond of oak. A healthy tree can usually withstand only two years of defoliation before it is permanently damaged or dies. In Ohio, 51 counties are currently under gypsy moth quarantine regulations.

The department uses three programs to manage the gypsy moth population in Ohio. The suppression program is used in counties where the pest is already established, but landowners voluntarily request treatment to help suppress populations. The second program, slow-the-spread, occurs in counties in front of the larger, advancing gypsy moth population. The third program is the eradication program, used in counties where isolated populations develop ahead of advancing moth populations due to human movement of the moth. Officials work to detect and control isolated populations to slow the overall advancement of the gypsy moth infestation.

In total for the state, 5,470 acres in 10 counties will receive treatment. For more information about the gypsy moth quarantine or for specific treatment locations, visit www.agri.ohio.gov.
